

NGUYEN GIA HUY

Java Backend Engineer

johnnynguyen882@gmail.com | 0948385149 | linkedin.com/in/huy8bit

PROFESSIONAL SUMMARY

Backend engineer moving into Java/Spring Boot, with nearly three years building transactional, integration-heavy backends in Golang and Python: lending and overdraft transaction logic on a core banking platform, a microservices ecosystem of **100+ services** behind an API gateway, Keycloak-based multi-tenant authorization, and Kafka, Redis, and MongoDB services handling **1.5K requests/second**. Working knowledge of **Java** and **Spring Boot**.

TECHNICAL SKILLS

Languages: Java, Spring Boot (working knowledge); Golang, Python, SQL (production)
APIs & Architecture: REST/JSON, gRPC, microservices, API gateway (Kong), event-driven services
Security: Authentication and authorization, Keycloak, RBAC, multi-tenancy
Data & Messaging: PostgreSQL, Redis, MongoDB, OpenSearch, Kafka, RabbitMQ
Testing & Delivery: Automated simulation testing, CI/CD, Docker, Kubernetes, Jenkins, Git
Cloud: AWS (EKS, ECS, RDS, Lambda)

WORK EXPERIENCE

Backend Engineer, Core Banking (Middle Software Engineer) 03/2026 – Present
Galaxy FinX (Vikki Digital Bank) | *core banking platform built on Thought Machine Vault Core*

- Modeled **financial transactions** for Lending and Overdraft (accrual of interest, penalty and late fees, repayments, settlement) inside Thought Machine Vault Core's Python contract framework.
- Made the product test suite **20x faster** (24 minutes to just over 50 seconds) by replacing the Gauge-based **simulation testing framework** with one written in Golang.
- Cut account migration from **2.5 hours to 27 minutes (5x)** with a dedicated migration system over **Amazon RDS**, written in Golang and run on ECS and Lambda.
- Shipped the platform through a **CI/CD pipeline** (build, test, deploy) onto Amazon EKS, with container images in ECR and traffic through ELB.

Software Engineer – Backend & Data Services 04/2025 – 03/2026
Vietlink (KDDI Agile Development Center Group) | *au Denki – large-scale electric utility platform serving millions of users*

- Reworked **data access patterns** and parallelized batch processing, increasing throughput by **150%**.
- Moved the search and analytics service from **Elasticsearch to OpenSearch**, redesigning ingestion and indexing for data consistency and query performance.

Software Engineer – Microservices & Identity 04/2024 – 04/2025
VNPAY | *VNPAY Cloud – cloud platform for fintech and enterprise customers*

- Implemented the **authorization model** of a multi-tenant cloud platform: Keycloak identities plus **role-based access control** that keep **20+ customer organizations** isolated from each other.
- Centralized service-level and network-level access control for a **microservices ecosystem of 100+ services** in **Kong Gateway**.

Blockchain Developer 06/2023 – 09/2023
EsolLabs | *Innovaz Market Factory – cross-chain NFT and token platform*

- Kept transaction handling consistent across **5+ blockchain networks** in event-driven services that write on-chain events into off-chain databases.

SELECTED PROJECTS

DattingQ | Software Engineer *Dating platform*

- Built a backend exposing **REST/JSON APIs** through gRPC-Gateway, with **Kafka**, **Redis**, and MongoDB, sustaining up to **1.5K requests/second** at **80–100 ms**.
- Implemented multi-cluster failover and observability (OpenTelemetry, Prometheus, Grafana, ELK) for **99.95% uptime**.

EDUCATION & CERTIFICATIONS

University of Science, Ho Chi Minh City (HCMUS) B.Sc. Information Technology – Knowledge Engineering
DevOps on AWS Specialization | Coursera
