

NGUYEN GIA HUY

SOFTWARE ENGINEER

johnnynguyen882@gmail.com | 0948385149 | linkedin.com/in/huy8bit

SKILLS

Programming Languages: Golang, Python, Java
Databases: PostgreSQL, MongoDB, Redis, Elasticsearch, OpenSearch, ClickHouse
Messaging & Streaming: Kafka, RabbitMQ
Cloud & Infrastructure: AWS, OpenStack, Kubernetes, Terraform, Docker, Consul, Vault
Core Banking: Vault Core (Thought Machine)
Observability: OpenTelemetry, Prometheus, Grafana, ELK
APIs & Frameworks: Spring Boot, FastAPI, gRPC
CI/CD & Tooling: Git, Jenkins, ArgoCD, Postman

EXPERIENCE

Galaxy FinX (Vikki Digital Bank) | Middle Software Engineer, Core Banking 03/2026 – Present

Vikki Digital Bank – Core banking platform built on Thought Machine Vault Core

- Developed and maintained **Lending** and **Overdraft** products on **Vault Core**, implementing interest accrual, penalty and late-fee calculation, repayment, and settlement logic using **Python Smart Contracts**.
- Rebuilt the simulation testing framework entirely in Golang, replacing the legacy Gauge-based framework and reducing execution time from **24 minutes to just over 50 seconds (20x faster)**.
- Deployed a new **Vault Core** version on **AWS**, provisioning and integrating **EKS, RDS, ECR, and ELB**, and built the **CI/CD pipeline** for automated build, test, and deployment.
- Built an account migration system using Golang and AWS (ECS, Lambda, RDS), reducing migration time from **2.5 hours to 27 minutes (5x faster)**.
- Integrated **Vault Core** with **external backend services** to support core banking operations and transaction workflows.

Vietlink (KDDI Agile Development Center Group) | Software Engineer 04/2025 – 03/2026

au – Large-scale electric utility platform serving millions of users

- Designed, developed, and operated **ETL data pipelines** on AWS using **Lambda, ECS, RDS, S3, and Athena**, transforming and processing large-scale utility data for downstream analytics and operational workloads.
- Optimized batch-oriented data processing workflows, improving processing throughput by **150%** through pipeline redesign, parallel execution, and more efficient data access patterns.
- Migrated the search and analytics platform from **Elasticsearch** to **OpenSearch**, redesigning data ingestion and indexing flows to improve stability, consistency, and query performance.
- Built and maintained data-platform infrastructure using **Terraform** and **AWS SAM**, and implemented monitoring with **CloudWatch** and **DataDog** for pipeline health, failures, and operational anomaly detection.

VNPAY | Software Engineer 04/2024 – 04/2025

VNPAY Cloud – Cloud platform for fintech and enterprise customers

- Designed and operated a private cloud platform based on OpenStack and Cluster API, enabling automated provisioning, scaling, and zero-downtime upgrades for **50+ production Kubernetes clusters**.
- Implemented multi-tenant authentication and authorization using Keycloak and role-based access control, ensuring tenant isolation across **20+ customer organizations**.
- Integrated and operated Kong Gateway for a microservices ecosystem of **100+ services**, implementing service-level and network-level access controls.
- Automated approximately **80%** of data center provisioning and infrastructure configuration processes, significantly reducing manual operational effort.

EsolLabs | Blockchain Developer 06/2023 – 09/2023

Innovaz Market Factory – Cross-chain NFT and token platform

- Developed and reviewed **15+ smart contracts** for DeFi and NFT use cases using Solidity and Move.
- Built **event-driven backend services** to capture, process, and synchronize on-chain events into **off-chain databases and APIs**.
- Integrated backend services with **5+ blockchain networks**, including Ethereum, BSC, Polygon, Aptos, and Sui, ensuring consistent transaction handling and data integrity.

PROJECTS

DattingQ – Software Engineer | Dating platform

- Built the backend using gRPC-Gateway, Kafka, MongoDB, and Redis, supporting up to **1.5K requests/second** with **80–100ms API latency**.
- Implemented multi-cluster failover and observability with OpenTelemetry, Prometheus, Grafana, ELK, and ClickHouse, achieving **99.95% uptime**.

3 | MeetQ – Software Engineer

AI-powered online meeting platform

- Built a real-time meeting platform on **LiveKit**, integrating **OpenAI models** for live transcription, voice translation, and meeting summarization.
- Designed the **real-time translation pipeline** and optimized **conversational context handling** to improve translation accuracy and coherence.

EDUCATION & CERTIFICATIONS

University of Science, Ho Chi Minh City (HCMUS)

B.Sc. Information Technology – Knowledge Engineering Certificate

DevOps on AWS Specialization – Coursera
