PROFESSIONAL SUMMARY

Data engineer with nearly three years of software engineering experience and hands-on ownership of production data pipelines. Designed and operated AWS ETL pipelines on Lambda, ECS, S3, Athena, and RDS for au Denki, an electric utility platform serving millions of users; redesigned batch processing for a **150%** throughput gain; and migrated search analytics from Elasticsearch to OpenSearch. At a digital bank, built the account migration system that completes a migration in **27 minutes instead of 2.5 hours**.

TECHNICAL SKILLS

Data Engineering: ETL pipeline design, batch processing, parallel processing, data migration, search indexing, event ingestion
AWS Data Services: S3, Athena, Lambda, ECS, RDS
Languages: SQL, Python, Golang
Storage & Search: PostgreSQL, OpenSearch, Elasticsearch, ClickHouse, MongoDB, Redis
Streaming: Kafka
Pipeline Operations: Terraform, AWS SAM, CloudWatch, DataDog, Docker

WORK EXPERIENCE

Middle Software Engineer – Core Banking Data Migration 03/2026 – Present
Galaxy FinX (Vikki Digital Bank) | *core banking platform built on Thought Machine Vault Core*

- Built the account migration system for the bank's core banking platform in **Golang** on AWS **ECS, Lambda, and RDS**, cutting each migration run from **2.5 hours to 27 minutes (5x faster)**.
- Implemented financial calculation logic for Lending and Overdraft products (interest accrual, penalty and late fees, repayment, and settlement) in Thought Machine Vault Core Python Smart Contracts.

Data Engineer (Software Engineer) 04/2025 – 03/2026
Vietlink (KDDI Agile Development Center Group) | *au Denki – large-scale electric utility platform serving millions of users*

- Designed, built, and operated the **AWS ETL pipelines** that ingest and transform large-scale utility data into datasets for downstream analytics and operational workloads.
- Combined serverless processing on **Lambda** with containerized batch jobs on **ECS**, storing data in **S3**, querying it with **Athena** SQL, and using **RDS** as the relational store.
- Redesigned batch-oriented workflows around **parallel execution** and more efficient data access patterns, increasing pipeline throughput by **150%**.
- Migrated search and analytics workloads from **Elasticsearch to OpenSearch**, re-architecting ingestion and indexing flows for data consistency, stability, and faster queries.
- Provisioned the data platform as code with **Terraform** and **AWS SAM**, and instrumented pipelines in **CloudWatch** and **DataDog** to catch failures and operational anomalies.

Software Engineer 04/2024 – 04/2025
VNPAY | *VNPAY Cloud – cloud platform for fintech and enterprise customers*

- Automated about **80%** of data center provisioning and infrastructure configuration for a private cloud running **50+ production Kubernetes clusters**.

Blockchain Developer – On-chain Data Ingestion 06/2023 – 09/2023
EsolLabs | *Innovaz Market Factory – cross-chain NFT and token platform*

- Built **event-driven ingestion services** that capture, process, and synchronize on-chain events into off-chain databases and APIs.
- Ingested from **5+ blockchain networks** (Ethereum, BSC, Polygon, Aptos, Sui) while keeping transaction handling consistent and preserving **data integrity** across chains.

SELECTED PROJECTS

DattingQ | Software Engineer *Dating platform*

- Built a **Kafka**-based backend with MongoDB and Redis behind gRPC-Gateway, sustaining up to **1.5K requests/second** at **80–100 ms** latency.
- Implemented a telemetry stack (OpenTelemetry, Prometheus, Grafana, ELK, **ClickHouse**) and multi-cluster failover, keeping the platform at **99.95% uptime**.

EDUCATION & CERTIFICATIONS

University of Science, Ho Chi Minh City (HCMUS) B.Sc. Information Technology – Knowledge Engineering
DevOps on AWS Specialization | Coursera
