

NGUYEN GIA HUY

Golang Backend Engineer

johnnynguyen882@gmail.com | 0948385149 | linkedin.com/in/huy8bit

PROFESSIONAL SUMMARY

Golang backend engineer with nearly three years of software engineering experience, building performance-critical services and tooling for core banking. In Go, delivered an AWS account migration system that runs **5x faster** (2.5 hours to 27 minutes) and a simulation testing framework **20x faster** than the Gauge-based suite it replaced. Builds gRPC and gRPC-Gateway backends on Kafka, MongoDB, and Redis that serve **1.5K requests/second** at **80–100 ms** latency.

TECHNICAL SKILLS

Golang: Go, concurrency (goroutines, channels), gRPC, gRPC-Gateway, Protocol Buffers, REST/JSON APIs
Messaging: Kafka, RabbitMQ
Data Stores: PostgreSQL, MongoDB, Redis, OpenSearch, ClickHouse
Microservices: API gateway (Kong), Keycloak (RBAC), Docker, Kubernetes
Cloud: AWS (ECS, Lambda, EKS, RDS, S3)
Observability: OpenTelemetry, Prometheus, Grafana, ELK
Also used: Python (Vault Core Smart Contracts), SQL

WORK EXPERIENCE

Golang Backend Engineer, Core Banking (Middle Software Engineer) 03/2026 – Present

Galaxy FinX (Vikki Digital Bank) | *core banking platform built on Thought Machine Vault Core*

- Built the core banking **account migration system in Golang**, running its processing on AWS **ECS and Lambda** against **RDS**, and cut migration time from **2.5 hours to 27 minutes (5x faster)**.
- Rewrote the Vault Core **simulation testing framework entirely in Golang**, replacing the legacy Gauge-based framework and reducing execution time from **24 minutes to just over 50 seconds (20x faster)**.
- Beyond the Go work, shipped Lending and Overdraft logic in Vault Core's Python contracts, connected the platform to external backend services, and deployed it on AWS EKS behind CI/CD.

Software Engineer – Backend & Data Services

04/2025 – 03/2026

Vietlink (KDDI Agile Development Center Group) | *au Denki – large-scale electric utility platform serving millions of users*

- Restructured batch services for **parallel execution** and more efficient data access patterns, raising processing throughput by **150%**.
- Ran ETL services on **Lambda** and **ECS** that process large-scale utility data for au Denki, with S3, Athena, and RDS as data stores.

Software Engineer

04/2024 – 04/2025

VNPAY | *VNPAY Cloud – cloud platform for fintech and enterprise customers*

- Operated **50+ production Kubernetes clusters** (OpenStack, Cluster API) with zero-downtime upgrades, and Kong Gateway access control for a **100+ service** microservices ecosystem.

Blockchain Developer

06/2023 – 09/2023

EsolLabs | *Innovaz Market Factory – cross-chain NFT and token platform*

- Connected **5+ blockchain networks** (Ethereum, BSC, Polygon, Aptos, Sui) to event-driven backend services feeding off-chain databases and APIs, with consistent transaction handling.

KEY PROJECT

DattingQ | Software Engineer

Dating platform

- Built the backend API layer with **gRPC** and **gRPC-Gateway**, exposing REST/JSON endpoints generated from Protocol Buffer contracts.
- Backed the services with **Kafka**, **MongoDB**, and **Redis**, at up to **1.5K requests/second** and **80–100 ms**.
- Implemented multi-cluster failover and OpenTelemetry-based observability with Prometheus, Grafana, ELK, and ClickHouse, achieving **99.95% uptime**.

EDUCATION & CERTIFICATIONS

University of Science, Ho Chi Minh City (HCMUS)

B.Sc. Information Technology – Knowledge Engineering

DevOps on AWS Specialization | Coursera
