PROFESSIONAL SUMMARY

Software engineer with nearly three years of end-to-end delivery across banking, energy, and cloud platforms: financial product logic and Golang tooling at a digital bank, AWS data pipelines for a utility platform serving millions of users, multi-tenant Kubernetes infrastructure for a fintech cloud, and event-driven blockchain services. Consistently turns bottlenecks into measured wins: **20x faster** test execution, **5x faster** account migration, **150%** higher batch throughput, and about **80%** of data center provisioning automated.

TECHNICAL SKILLS

Languages:	Golang, Python, SQL, Java, Solidity, Move
Backend Systems:	gRPC, REST, microservices, Kafka, event-driven services
Data:	PostgreSQL, MongoDB, Redis, OpenSearch, ClickHouse, Amazon Athena, ETL pipelines
Cloud & Infrastructure:	AWS, OpenStack, Kubernetes, Cluster API, Docker, Terraform
Reliability & Delivery:	OpenTelemetry, Prometheus, Grafana, CloudWatch, DataDog, CI/CD
Domain:	Core banking (Thought Machine Vault Core), utilities data, fintech cloud, blockchain

WORK EXPERIENCE

Middle Software Engineer, Core Banking 03/2026 – Present

Galaxy FinX (Vikki Digital Bank) | *core banking platform built on Thought Machine Vault Core*

- **Product:** built and maintained the Lending and Overdraft products on Thought Machine Vault Core in Python Smart Contracts.
- **Financial logic:** implemented interest accrual, penalty and late fees, repayment, and settlement for both products.
- **Testing:** rebuilt the Gauge-based simulation test suite entirely in **Golang**.
- **Performance:** the new suite finishes in **just over 50 seconds instead of 24 minutes (20x faster)**.
- **Data:** built the account migration system in Golang on AWS ECS, Lambda, and RDS.
- **Performance:** brought a migration run from **2.5 hours down to 27 minutes (5x faster)**.
- **Infrastructure:** deployed the new Vault Core version on AWS, provisioning and integrating EKS, RDS, ECR, and ELB.
- **Delivery:** built the CI/CD pipeline that automates build, test, and deployment of the platform.
- **Integration:** connected Vault Core to the bank's external backend services for core banking operations and transaction workflows.

Software Engineer 04/2025 – 03/2026

Vietlink (KDDI Agile Development Center Group) | *au Denki – large-scale electric utility platform serving millions of users*

- Designed and ran the AWS ETL pipelines that turn large-scale utility data into inputs for analytics and operations.
- Combined serverless (Lambda) and containerized (ECS) processing with S3, Athena, and RDS as storage and query layers.
- Redesigned batch workflows with parallel execution and leaner data access, raising pipeline throughput by **150%**.
- Migrated search and analytics from **Elasticsearch to OpenSearch** and rebuilt ingestion and indexing along the way, making the platform more stable, consistent, and faster to query.
- Built and maintained the platform's infrastructure as code with Terraform and AWS SAM.
- Monitored pipeline health, failures, and operational anomalies with CloudWatch and DataDog.

Software Engineer 04/2024 – 04/2025

VNPAY | *VNPAY Cloud – cloud platform for fintech and enterprise customers*

- Designed and operated a private cloud on OpenStack serving **50+ production Kubernetes clusters**.
- Automated cluster provisioning, scaling, and **zero-downtime upgrades** with Cluster API.
- Ran Kong Gateway for **100+ microservices** and used it to secure them with service-level and network-level access control.
- Built tenant-aware sign-in on Keycloak for **20+ customer organizations**.
- Implemented role-based authorization that keeps each organization isolated from the others.
- Automated about **80%** of data center provisioning and infrastructure configuration, significantly reducing manual work.

Blockchain Developer

06/2023 – 09/2023

EsolLabs | *Innovaz Market Factory – cross-chain NFT and token platform*

- Wrote and reviewed **15+ smart contracts** in Solidity and Move for DeFi and NFT use cases.
- Bridged on-chain and off-chain systems with event-driven services that capture, process, and sync on-chain events into databases and APIs.
- Supported **5+ chains** (Ethereum, BSC, Polygon, Aptos, Sui) with consistent transaction handling and intact data.

SELECTED PROJECTS

DattingQ | Software Engineer

Dating platform

- Built a gRPC-Gateway, Kafka, MongoDB, and Redis backend.
- Sustained up to **1.5K requests/second** at **80–100 ms** latency.
- Added multi-cluster failover and observability (OpenTelemetry, Prometheus, Grafana, ELK, ClickHouse) for **99.95% uptime**.

MeetQ | Software Engineer

AI-powered online meeting platform

- Built a LiveKit meeting platform with OpenAI-powered live transcription, voice translation, and summaries.
- Designed its real-time translation pipeline and optimized conversational context handling for accuracy and coherence.

EDUCATION & CERTIFICATIONS

University of Science, Ho Chi Minh City (HCMUS)

B.Sc. Information Technology – Knowledge Engineering

DevOps on AWS Specialization | Coursera
