

NGUYEN GIA HUY

Platform Engineer

johnnynguyen882@gmail.com | 0948385149 | linkedin.com/in/huy8bit

PROFESSIONAL SUMMARY

Platform engineer with nearly three years of experience building the shared foundations that engineering teams and customers rely on. At VNPAY Cloud, built and operated a multi-tenant Kubernetes platform on OpenStack and Cluster API (**50+ production clusters**, zero-downtime upgrades) together with shared platform services: Kong Gateway for a **100+ service** ecosystem and Keycloak identity for **20+ customer organizations**. At Vikki Digital Bank, built internal tooling and delivery infrastructure: a Golang simulation testing framework that runs **20x faster**, the AWS deployment and CI/CD path for Thought Machine Vault Core, and a Golang account migration system.

TECHNICAL SKILLS

Kubernetes Platform:	Kubernetes, Cluster API, OpenStack, Amazon EKS, Docker
Shared Platform Services:	Kong Gateway, Keycloak (identity, RBAC, multi-tenancy), Consul, HashiCorp Vault
Developer Tooling:	Test frameworks in Golang, CI/CD pipelines, Jenkins, ArgoCD, Git
Infrastructure as Code:	Terraform, AWS SAM
Observability:	OpenTelemetry, Prometheus, Grafana, ELK, CloudWatch, DataDog
Cloud:	AWS (EKS, ECS, ECR, ELB, Lambda, RDS, S3, Athena)
Languages:	Golang, Python

WORK EXPERIENCE

Middle Software Engineer – Internal Tooling & Delivery Platform 03/2026 – Present

Galaxy FinX (Vikki Digital Bank) | *core banking platform built on Thought Machine Vault Core*

- Rebuilt the team's **simulation testing framework** entirely in **Golang**, replacing the legacy Gauge-based framework.
- Cut simulation test execution from **24 minutes to just over 50 seconds (20x faster)**, shortening the development feedback loop for product engineers.
- Built the delivery path for Thought Machine Vault Core on AWS, deploying a new platform version on **EKS** with **RDS**, **ECR**, and **ELB**.
- Built the **CI/CD pipeline** that automates build, test, and deployment for the platform.
- Built account migration tooling in Golang on ECS, Lambda, and RDS, reducing a migration run from **2.5 hours to 27 minutes (5x faster)**.
- Integrated Vault Core with external backend services, supporting core banking operations and transaction workflows.
- Developed and maintained the Lending and Overdraft products in Python Smart Contracts (interest accrual, penalty and late fees, repayment, settlement).

Software Engineer – Data Platform 04/2025 – 03/2026

Vietlink (KDDI Agile Development Center Group) | *au Denki – large-scale electric utility platform serving millions of users*

- Codified the data platform's infrastructure with **Terraform**, building and maintaining it as code.
- Deployed the platform's serverless components with **AWS SAM**.
- Gave the platform **CloudWatch** and **DataDog** monitoring for pipeline health, failure detection, and operational anomaly detection.
- Moved the platform's search and analytics backend from **Elasticsearch to OpenSearch**, redesigning ingestion and indexing flows for stability, consistency, and query performance.
- Designed, built, and operated ETL pipelines on Lambda, ECS, RDS, S3, and Athena serving analytics and operational consumers.
- Raised batch throughput by **150%** through pipeline redesign, parallel execution, and more efficient data access.

Platform Engineer (Software Engineer) 04/2024 – 04/2025

VNPAY | *VNPAY Cloud – cloud platform for fintech and enterprise customers*

Kubernetes Platform

- Built and operated VNPAY Cloud's **Kubernetes platform** on OpenStack, hosting **50+ production clusters** for fintech and enterprise customers.
- Turned cluster creation into a platform capability with **Cluster API**, so new Kubernetes clusters are provisioned through automation rather than manual builds.
- Provided automated cluster scaling through the same Cluster API-based lifecycle.
- Delivered **zero-downtime upgrades** as part of the platform's cluster lifecycle, keeping workloads running while clusters were upgraded.

Shared Platform Services

- Ran **Kong Gateway** as the shared API gateway for a **100+ service** microservices ecosystem, centralizing access control in one layer.
- Implemented service-level and network-level access control policies in the gateway, applied consistently across services.
- Delivered multi-tenant identity as a platform service with **Keycloak**, giving **20+ customer organizations** isolated authentication.
- Built role-based authorization on top of the identity service so that tenant boundaries are enforced for every organization.

Platform Automation

- Automated about **80%** of data center provisioning, turning manual operational processes into repeatable automation.
- Automated the infrastructure configuration processes behind the platform, significantly reducing manual operational effort.

Blockchain Developer

06/2023 – 09/2023

EsoiLabs | *Innovaz Market Factory – cross-chain NFT and token platform*

- Built event-driven backend services synchronizing on-chain events into off-chain databases and APIs.
- Integrated the services with **5+ blockchain networks** (Ethereum, BSC, Polygon, Aptos, Sui) with consistent transaction handling and data integrity.
- Developed and reviewed **15+ smart contracts** for DeFi and NFT use cases in Solidity and Move.

SELECTED PROJECTS

DattingQ | Software Engineer

Dating platform

- Implemented **multi-cluster failover** and a shared observability stack (**OpenTelemetry, Prometheus, Grafana, ELK, ClickHouse**), keeping the platform at **99.95% uptime**.
- Built the backend on gRPC-Gateway, Kafka, MongoDB, and Redis, serving up to **1.5K requests/second** at **80–100 ms** latency.

MeetQ | Software Engineer

AI-powered online meeting platform

- Built a real-time meeting platform on LiveKit with OpenAI models for live transcription, voice translation, and summarization; designed its real-time translation pipeline.

EDUCATION & CERTIFICATIONS

University of Science, Ho Chi Minh City (HCMUS)

B.Sc. Information Technology – Knowledge Engineering

DevOps on AWS Specialization | Coursera
