

# NGUYEN GIA HUY

## Cloud Engineer

johnnynguyen882@gmail.com | 0948385149 | linkedin.com/in/huy8bit

### PROFESSIONAL SUMMARY

---

Cloud Engineer with experience on both AWS and OpenStack. Designed and operated VNPAY Cloud's private cloud, which runs 50+ production Kubernetes clusters for fintech and enterprise customers. On AWS, has deployed core banking and data workloads on EKS, ECS, Lambda, RDS, S3, and Athena, with infrastructure managed in Terraform.

### TECHNICAL SKILLS

---

**Cloud Platforms:** AWS, OpenStack  
**AWS Services:** EKS, ECS, Lambda, RDS, S3, Athena, ELB  
**Kubernetes:** Kubernetes, Cluster API, Docker  
**IaC & Monitoring:** Terraform, AWS SAM, CloudWatch, DataDog  
**Identity & Access:** Keycloak, RBAC, Kong Gateway

### WORK EXPERIENCE

---

#### Middle Software Engineer – AWS Cloud Infrastructure 03/2026 – Present

**Galaxy FinX (Vikki Digital Bank)** | *core banking platform built on Thought Machine Vault Core*

- Deployed a new Thought Machine Vault Core version on AWS: EKS for the platform workloads, RDS for the database, ECR for container images, and ELB for load balancing.
- Set up the CI/CD pipeline that builds, tests, and deploys the platform.
- Ran the account migration system as a mix of ECS containers and Lambda functions over RDS; the Golang implementation cut migration time from **2.5 hours to 27 minutes**.
- Rebuilt the Gauge-based simulation testing framework in Golang, cutting test time from **24 minutes to just over 50 seconds**.
- Outside the infrastructure work, developed Lending and Overdraft logic in Vault Core's Python Smart Contracts and connected the platform to external backend services.

#### Software Engineer – AWS Data Platform 04/2025 – 03/2026

**Vietlink (KDDI Agile Development Center Group)** | *au Denki – large-scale electric utility platform serving millions of users*

- Built and operated ETL pipelines on AWS, using Lambda for serverless steps and ECS for containerized batch jobs, with S3 and Athena for storage and querying and RDS for relational data.
- Provisioned the platform's AWS resources with Terraform and deployed its serverless components with AWS SAM.
- Monitored the workloads with CloudWatch and DataDog for pipeline health, failures, and operational anomalies.
- Improved batch throughput by **150%** through pipeline redesign, parallel execution, and better data access patterns.
- Moved search workloads onto OpenSearch from Elasticsearch, with redesigned ingestion and indexing that improved stability, consistency, and query performance.

#### Cloud Engineer, OpenStack & Kubernetes (Software Engineer) 04/2024 – 04/2025

**VNPAY** | *VNPAY Cloud – cloud platform for fintech and enterprise customers*

- Designed the OpenStack architecture behind VNPAY Cloud and operated it in production, hosting **50+** Kubernetes clusters for fintech and enterprise customers.
- Used Cluster API to provision and scale Kubernetes clusters on OpenStack declaratively, without hand-built infrastructure.
- Kept production clusters available during Kubernetes version upgrades by rolling machines through Cluster API, with zero downtime.
- Implemented tenant isolation for **20+** customer organizations with Keycloak-based multi-tenant authentication and role-based access control.

- Set up Kong Gateway as the access layer for **100+** microservices and operated it, with access policies at both the service and the network level.
- Automated about **80%** of the provisioning and configuration work in VNPAY's data centers.

## **Blockchain Developer**

06/2023 – 09/2023

**EsolLabs** | *Innovaz Market Factory – cross-chain NFT and token platform*

- Built event-driven services connecting on-chain events to off-chain databases and APIs across **5+** blockchain networks, with consistent transaction handling.
- Developed and reviewed **15+** smart contracts for DeFi and NFT use cases in Solidity and Move.

## **SELECTED PROJECTS**

---

**DattingQ** | Software Engineer

*Dating platform*

- Set up multi-cluster failover and monitoring (OpenTelemetry, Prometheus, Grafana, ELK, ClickHouse) for a backend that handled up to **1.5K** requests per second at **99.95%** uptime.

## **EDUCATION & CERTIFICATIONS**

---

**University of Science, Ho Chi Minh City (HCMUS)**

B.Sc. in Information Technology, Knowledge Engineering

**DevOps on AWS Specialization** | Coursera
