

NGUYEN GIA HUY

DevOps Engineer

johnnynguyen882@gmail.com | 0948385149 | linkedin.com/in/huy8bit

PROFESSIONAL SUMMARY

DevOps Engineer focused on Kubernetes operations, infrastructure automation, and CI/CD. Operated an OpenStack private cloud with 50+ production Kubernetes clusters at VNPAY, and most recently deployed a core banking platform on AWS EKS and built its delivery pipeline. Works mainly with Terraform, AWS, and production monitoring.

TECHNICAL SKILLS

Containers & Orchestration:	Kubernetes, Cluster API, Docker
Cloud:	AWS (EKS, ECS, Lambda, RDS), OpenStack
IaC & CI/CD:	Terraform, AWS SAM, Jenkins, ArgoCD
Observability:	Prometheus, Grafana, CloudWatch, DataDog
Security & Networking:	Kong Gateway, Keycloak
Scripting:	Golang, Python

WORK EXPERIENCE

Middle Software Engineer – Cloud Infrastructure & Automation 03/2026 – Present
Galaxy FinX (Vikki Digital Bank) | *core banking platform built on Thought Machine Vault Core*

- Deployed a new Thought Machine Vault Core version on AWS, setting up EKS, RDS, ECR, and ELB for the bank's core banking platform.
- Built the CI/CD pipeline for Vault Core with automated build, test, and deployment stages.
- Cut simulation test time from **24 minutes to just over 50 seconds** by rewriting the Gauge-based test framework in Golang.
- Built and deployed a Golang account migration system on ECS and Lambda with RDS, reducing migration time from **2.5 hours to 27 minutes**.
- Also developed Lending and Overdraft product logic as Python Smart Contracts and integrated Vault Core with the bank's external backend services.

Software Engineer – Data Platform Infrastructure 04/2025 – 03/2026
Vietlink (KDDI Agile Development Center Group) | *au Denki – large-scale electric utility platform serving millions of users*

- Managed the AWS infrastructure for au Denki's data platform with Terraform and AWS SAM, covering both Lambda functions and ECS workloads.
- Set up CloudWatch and DataDog monitoring for pipeline health, failures, and anomaly detection.
- Operated ETL pipelines on Lambda, ECS, RDS, S3, and Athena that process large-scale utility data for analytics and operational systems.
- Improved batch throughput by **150%** by redesigning the pipelines, adding parallel execution, and optimizing data access.
- Migrated the search platform from Elasticsearch to OpenSearch, with new ingestion and indexing flows for better stability, consistency, and query performance.

Cloud Platform Engineer (Software Engineer) 04/2024 – 04/2025
VNPAY | *VNPAY Cloud – cloud platform for fintech and enterprise customers*

- Designed and operated the OpenStack private cloud behind VNPAY Cloud, which runs **50+** production Kubernetes clusters for fintech and enterprise customers.
- Automated the cluster lifecycle with Cluster API, so that production clusters are provisioned and scaled without manual work.
- Performed zero-downtime Kubernetes upgrades across production clusters using Cluster API's rolling machine replacement.
- Automated about **80%** of data center provisioning and infrastructure configuration, which removed most of the manual setup work.

- Integrated and operated Kong Gateway for **100+** microservices, configuring service-level and network-level access control.
- Implemented multi-tenant authentication and authorization with Keycloak and RBAC, keeping **20+** customer organizations isolated on shared infrastructure.

Blockchain Developer

06/2023 – 09/2023

EsolLabs | *Innovaz Market Factory – cross-chain NFT and token platform*

- Built event-driven backend services that sync on-chain events from **5+** blockchain networks (Ethereum, BSC, Polygon, Aptos, Sui) into off-chain databases and APIs, with consistent transaction handling.
- Wrote and reviewed **15+** DeFi and NFT smart contracts in Solidity and Move.

SELECTED PROJECTS

DattingQ | Software Engineer

Dating platform

- Set up multi-cluster failover and observability with OpenTelemetry, Prometheus, Grafana, ELK, and ClickHouse; the platform ran at **99.95%** uptime.
- Built the backend on gRPC-Gateway, Kafka, MongoDB, and Redis, handling up to **1.5K** requests per second at 80–100 ms latency.

EDUCATION & CERTIFICATIONS

University of Science, Ho Chi Minh City (HCMUS)

B.Sc. in Information Technology, Knowledge Engineering

DevOps on AWS Specialization | Coursera
