

NGUYEN GIA HUY

Java Backend Engineer

johnnynguyen882@gmail.com | 0948385149 | linkedin.com/in/huy8bit

PROFESSIONAL SUMMARY

Backend engineer with production experience in Golang and Python and working knowledge of Java and Spring Boot. Has worked on core banking transaction logic, service integrations, multi-tenant authentication, and microservices behind an API gateway, all of which carry over to Spring-based backends.

TECHNICAL SKILLS

Languages: Golang, Python, SQL, Java (working knowledge)
Frameworks & APIs: Spring Boot (working knowledge), REST APIs, gRPC
Data & Messaging: PostgreSQL, Redis, MongoDB, Kafka
Security: Keycloak, RBAC
Infrastructure: Docker, Kubernetes, AWS, CI/CD

WORK EXPERIENCE

Backend Engineer, Core Banking (Middle Software Engineer) 03/2026 – Present
Galaxy FinX (Vikki Digital Bank) | *core banking platform built on Thought Machine Vault Core*

- Implemented transaction logic for the Lending and Overdraft products on Thought Machine Vault Core (Python Smart Contracts), including interest accrual and penalty and late-fee calculation.
- Implemented the repayment and settlement flows that close out what customers owe under each product.
- Built integrations between Vault Core and the bank's external backend services, supporting core banking operations and transaction workflows.
- Built an account migration system in Golang, backed by Amazon RDS and running on ECS and Lambda, that reduced migration time from **2.5 hours to 27 minutes**.
- Rebuilt the automated simulation testing framework in Golang, replacing the Gauge-based framework and cutting test runs from **24 minutes to just over 50 seconds**.
- Deployed a new Vault Core version to Amazon EKS (with RDS, ECR, and ELB) and built the CI/CD pipeline for build, test, and deployment.

Software Engineer – Backend & Data Services 04/2025 – 03/2026
Vietlink (KDDI Agile Development Center Group) | *au Denki – large-scale electric utility platform serving millions of users*

- Improved batch throughput by **150%** by reworking data access patterns, redesigning the pipelines, and running processing in parallel.
- Migrated the search service from Elasticsearch to OpenSearch, redesigning data ingestion and indexing for consistency, stability, and query performance.
- Built ETL services on AWS Lambda and ECS, with RDS as the relational store and S3 and Athena for analytics.
- Managed the services with Terraform and AWS SAM and monitored them in CloudWatch and DataDog.

Software Engineer – Microservices & Identity 04/2024 – 04/2025
VNPAY | *VNPAY Cloud – cloud platform for fintech and enterprise customers*

- Integrated and operated Kong Gateway as the API gateway for a microservices ecosystem of **100+** services, with service-level and network-level access control.
- Implemented authentication and role-based authorization for a multi-tenant platform using Keycloak, keeping **20+** customer organizations isolated.
- Operated **50+** production Kubernetes clusters on OpenStack, with provisioning, scaling, and zero-downtime upgrades automated through Cluster API.
- Cut manual operations work by automating around **80%** of data center provisioning and configuration.

Blockchain Developer

06/2023 – 09/2023

EsolLabs | *Innovaz Market Factory – cross-chain NFT and token platform*

- Built event-driven backend services that write on-chain events into off-chain databases and APIs, with consistent transaction handling across **5+** blockchain networks.
- Also developed and reviewed **15+** smart contracts in Solidity and Move.

SELECTED PROJECTS

DattingQ | Software Engineer

Dating platform

- Built a backend that exposes REST/JSON APIs through gRPC-Gateway, uses Kafka for messaging and Redis and MongoDB for storage, and handled up to **1.5K** requests per second at 80–100 ms latency.
- Set up multi-cluster failover and observability (OpenTelemetry, Prometheus, Grafana, ELK, ClickHouse) for **99.95%** uptime.

MeetQ | Software Engineer

AI-powered online meeting platform

- Built a real-time meeting backend on LiveKit with OpenAI-based transcription, voice translation, and summaries, including the real-time translation pipeline.

EDUCATION & CERTIFICATIONS

University of Science, Ho Chi Minh City (HCMUS)

B.Sc. in Information Technology, Knowledge Engineering

DevOps on AWS Specialization | Coursera
