PROFESSIONAL SUMMARY

Software Engineer with experience across backend development, data pipelines, and cloud infrastructure. Currently works on core banking at Vikki Digital Bank. Before that, built ETL pipelines on AWS for KDDI's au Denki platform and operated a private Kubernetes cloud at VNPAY.

TECHNICAL SKILLS

Languages: Golang, Python, SQL, Java
Backend: gRPC, REST APIs, Kafka, PostgreSQL, Redis
Data: ETL pipelines, OpenSearch
Cloud & Infrastructure: AWS, OpenStack, Kubernetes, Docker, Terraform
Monitoring & Delivery: Prometheus, Grafana, CloudWatch, CI/CD

WORK EXPERIENCE

Middle Software Engineer, Core Banking 03/2026 – Present
Galaxy FinX (Vikki Digital Bank) | *core banking platform built on Thought Machine Vault Core*

- Worked on the Lending and Overdraft products on Thought Machine Vault Core, writing the Python logic for interest accrual, penalty and late fees, repayment, and settlement.
- Replaced a slow Gauge-based simulation test suite with a Golang version; a full run now takes **just over 50 seconds instead of 24 minutes**.
- Wrote an account migration tool in Golang that runs on ECS and Lambda against RDS, bringing migration time down from **2.5 hours to 27 minutes**.
- Set up the AWS environment (EKS, RDS, ECR, ELB) and CI/CD pipeline for a new Vault Core release, and connected the platform to the bank's other backend services.

Software Engineer 04/2025 – 03/2026
Vietlink (KDDI Agile Development Center Group) | *au Denki – large-scale electric utility platform serving millions of users*

- Built ETL pipelines for au Denki, an electric utility service with millions of users, on Lambda, ECS, S3, Athena, and RDS, and kept them running in production.
- Raised batch throughput by **150%** by restructuring the pipelines to run work in parallel and read data more efficiently.
- Moved the search platform to OpenSearch from Elasticsearch, rewriting the ingestion and indexing flows along the way for a more stable, consistent, and faster index.
- Handled the pipelines' infrastructure (Terraform, AWS SAM) and monitoring (CloudWatch, DataDog).

Software Engineer 04/2024 – 04/2025
VNPAY | *VNPAY Cloud – cloud platform for fintech and enterprise customers*

- Designed and ran a private cloud on OpenStack hosting **50+** production Kubernetes clusters, using Cluster API to automate provisioning, scaling, and zero-downtime upgrades.
- Worked on access control for a microservices setup of **100+** services: Kong Gateway for service-level and network-level rules, and Keycloak with RBAC for **20+** tenant organizations.
- Automated most of the data center setup work, about **80%** of provisioning and configuration.

Blockchain Developer 06/2023 – 09/2023
EsolLabs | *Innovaz Market Factory – cross-chain NFT and token platform*

- Wrote and reviewed **15+** Solidity and Move smart contracts, and built the event-driven services that sync on-chain events from **5+** chains into off-chain databases and APIs.

SELECTED PROJECTS

DattingQ | Software Engineer

Dating platform

- Built the backend with gRPC-Gateway, Kafka, MongoDB, and Redis, handling up to **1.5K** requests per second at 80–100 ms latency.
- Set up multi-cluster failover and observability (OpenTelemetry, Prometheus, Grafana, ELK, ClickHouse) for **99.95%** uptime.

MeetQ | Software Engineer

AI-powered online meeting platform

- Built a real-time meeting platform on LiveKit with OpenAI-based transcription, voice translation, and summaries, and designed its real-time translation pipeline.

EDUCATION & CERTIFICATIONS

University of Science, Ho Chi Minh City (HCMUS)

B.Sc. in Information Technology, Knowledge Engineering

DevOps on AWS Specialization | Coursera
