

NGUYEN GIA HUY

Platform Engineer

johnnynguyen882@gmail.com | 0948385149 | linkedin.com/in/huy8bit

PROFESSIONAL SUMMARY

Platform Engineer working on Kubernetes platforms, shared services, and internal tooling. At VNPAY Cloud, built and operated a multi-tenant Kubernetes platform on OpenStack and Cluster API, together with its API gateway and identity services. At a digital bank, built the testing framework and AWS delivery pipeline for the core banking platform.

TECHNICAL SKILLS

Kubernetes Platform:	Kubernetes, Cluster API, OpenStack, Docker
Platform Services:	Kong Gateway, Keycloak
Infrastructure & Delivery:	Terraform, AWS SAM, Jenkins, ArgoCD
Cloud:	AWS (EKS, ECS, Lambda, RDS)
Observability:	Prometheus, Grafana, CloudWatch, DataDog
Languages:	Golang, Python

WORK EXPERIENCE

Middle Software Engineer – Internal Tooling & Delivery Platform 03/2026 – Present
Galaxy FinX (Vikki Digital Bank) | *core banking platform built on Thought Machine Vault Core*

- Rebuilt the team's simulation testing framework in Golang, replacing the Gauge-based framework. Test runs dropped from **24 minutes to just over 50 seconds**, giving engineers much faster feedback.
- Built the AWS environment for a new Vault Core version (EKS, RDS, ECR, ELB) and the CI/CD pipeline used to build, test, and deploy it.
- Wrote the account migration tooling in Golang (running on ECS and Lambda with RDS), which cut migration runs from **2.5 hours to 27 minutes**.
- Integrated Vault Core with the bank's other backend services so that core banking operations and transactions flow between systems.
- Developed and maintained Lending and Overdraft logic (interest accrual, penalty and late fees, repayment, settlement) as Python Smart Contracts.

Software Engineer – Data Platform 04/2025 – 03/2026
Vietlink (KDDI Agile Development Center Group) | *au Denki – large-scale electric utility platform serving millions of users*

- Managed the data platform's infrastructure as code with Terraform and AWS SAM.
- Added CloudWatch and DataDog monitoring for pipeline health, failures, and anomalies.
- Migrated the platform's search backend from Elasticsearch to OpenSearch and redesigned its ingestion and indexing flows, improving stability, consistency, and query performance.
- Built and ran the platform's ETL pipelines across Lambda, ECS, RDS, S3, and Athena, serving analytics and operational consumers.
- Improved batch throughput by **150%** through pipeline redesign, parallel execution, and better data access.

Platform Engineer (Software Engineer) 04/2024 – 04/2025
VNPAY | *VNPAY Cloud – cloud platform for fintech and enterprise customers*

- Built and operated the Kubernetes platform behind VNPAY Cloud on OpenStack, running **50+** production clusters for fintech and enterprise customers.
- Used Cluster API to automate cluster provisioning, scaling, and upgrades, including zero-downtime upgrades of production clusters.
- Ran Kong Gateway as the shared API gateway for **100+** microservices, with service-level and network-level access control managed in one place.
- Provided multi-tenant identity through Keycloak, with role-based access control that keeps each of the **20+** customer organizations isolated.
- Automated about **80%** of data center provisioning and configuration, turning manual setup into repeatable automation.

Blockchain Developer

06/2023 – 09/2023

EsolLabs | *Innovaz Market Factory – cross-chain NFT and token platform*

- Built the event-driven services that carried on-chain events from **5+** chains into off-chain databases and APIs, keeping transaction data consistent.
- Developed and reviewed **15+** smart contracts for DeFi and NFT use cases in Solidity and Move.

SELECTED PROJECTS

DattingQ | Software Engineer

Dating platform

- Set up multi-cluster failover and a shared observability stack (OpenTelemetry, Prometheus, Grafana, ELK, ClickHouse); the platform ran at **99.95%** uptime.
- Built the backend on gRPC-Gateway, Kafka, MongoDB, and Redis, handling up to **1.5K** requests per second at 80–100 ms latency.

EDUCATION & CERTIFICATIONS

University of Science, Ho Chi Minh City (HCMUS)

B.Sc. in Information Technology, Knowledge Engineering

DevOps on AWS Specialization | Coursera
